

USM

surrounded by nature

Plants make people happy. We are huge believers that spaces filled with greenery are the best places to work, live and meet in. People in contemporary society spend 80 to 90% of their time indoors every day. So we need to bring plants inside and surround ourselves with them – because plants can have an amazing impact on our wellbeing.

USM now offers an elegant and simple system to incorporate more plants into your office, home or public spaces – for plant enthusiasts and those who would like to become one.

Employees in generously landscaped offices are less ill

Design customized stunning space division in public spaces and office landscapes where people can take refuge and switch off.

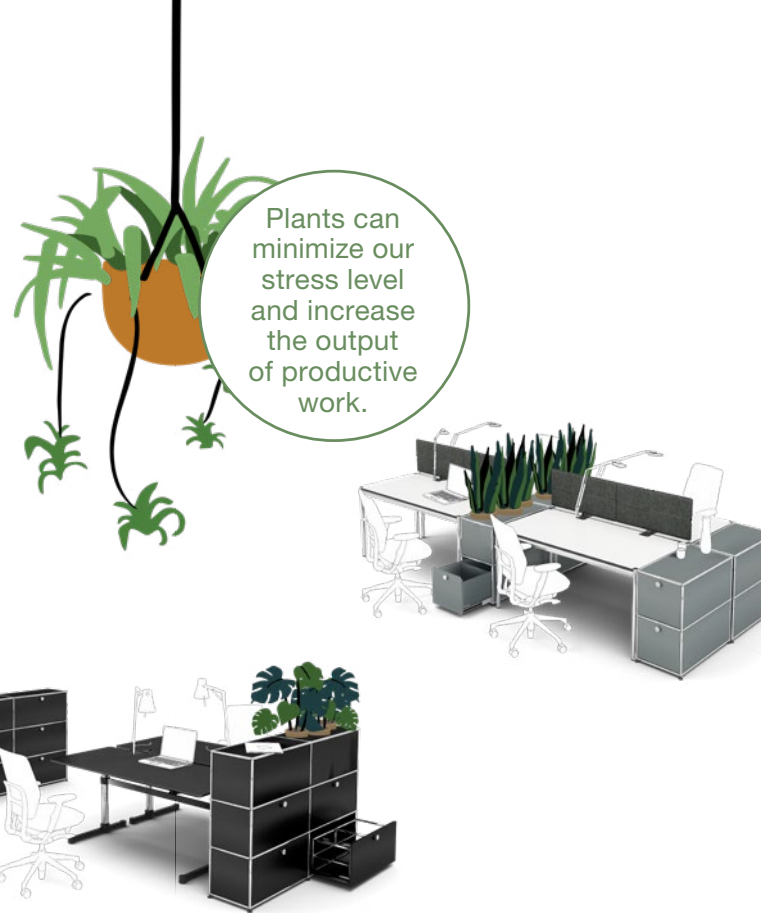

Plants contribute to the purification of indoor air and simultaneously release oxygen.

Work-life Balance

In the open office or coworking areas, USM Haller furniture with integrated plants can be used as a privacy divider between workplaces or to structure rooms. In the lounge space, it creates a retreat, inviting employees to get together and take a short break.

Welcome your guests with a friendly atmosphere.

Blend your media technology into a flourishing green landscape.

Bring nature into your home

This simple and elegant system is perfect for the home to create a green oasis in the living room or an eye catcher, in form of an herb trolley, in the kitchen. By using USM Haller E, subdued lighting conditions contribute to a quiet retreat to meditate and relax, allowing the user to settle down from a hectic everyday life.

Public spaces: friendly and welcoming atmosphere

In public spaces the world of plants can be integrated in restaurants to create a cozy nook, set accents, or allow for privacy, selectively in museum shops next to postcards and accessories displays, or as a green welcoming reception in hospitals.

If you care well for your plants, then your plants will also care for you.

Like all new developments from USM, the world of plants can easily be integrated into USM Haller E at any time and retrofitted into existing furniture.

Easy upgrade with LED lights

In combination with USM Haller E the scope of application for the world of plants gets even bigger and more tempting. Dimming the light and selectively illuminating the green splendour in a public or office space, creates an intimate and warm atmosphere, allowing to pause for a moment before the next meeting. As a result, the addition of USM Haller E not only offers plants constant lighting conditions according to their needs but opens up unlimited design options for the user.

Plants
make
people
happy.

Components

Metal plant panels

Metal plant panels with circular recesses and protective rings to hold the pots. Available in five sizes and 14 USM colors each.

Terracotta

Basalt

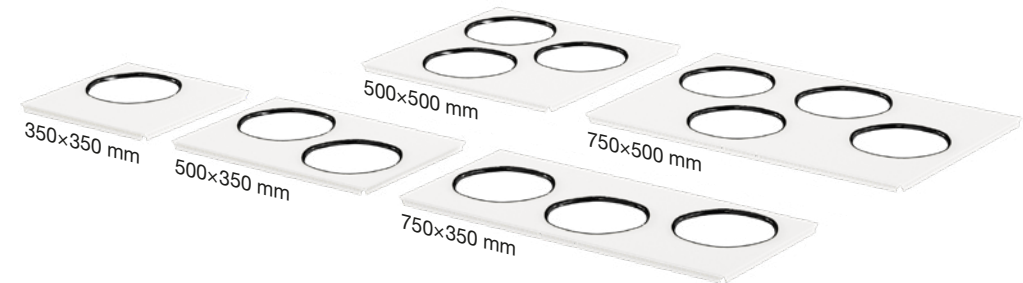

Pot

Made in Germany from ceramic clay mixture. Available in one standard size in the colors Terracotta and Basalt.

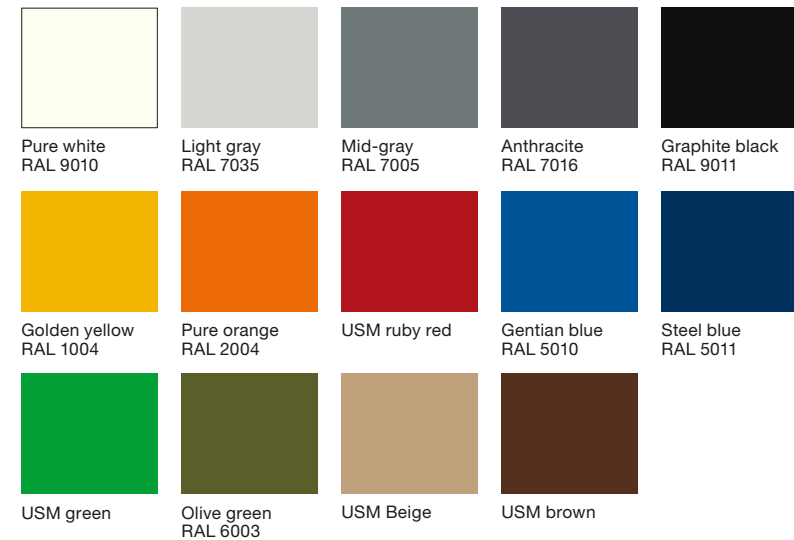

Ø edge: approx. 220 mm
Ø bottom: approx. 133 mm
H 200 mm

Dimensions

Depending on the size of the metal plant panel, one to four pot recesses are defined.

Colors

Pot insert

Water level indicator

With the watering set, consisting of a pot insert and water level indicator, the product does not only appeal to plant lovers. The set supports you by regulating and extending the pouring cycle. The water level indicator tells you how much water needs to be poured. Thus the watering set offers the customer simplicity when it comes to caring for the plants.
